Communicate better with brevis.one

Automate SMS from Virtually any Software Application

The automated sending of messages via HTTP API is what makes every brevis.one SMS Gateway stand out.

Easy to Use, Easy to Configure

Thanks to user-friendly web interface and address book function, it is easier than ever before to send SMS to individual phone numbers or contacts.

Safe and Secure

Communication with the appliance is secured by HTTPS. Your valuable data is sent directly from the device into the mobile network of your carrier.

YOU CHOOSE

Small desktop or 19-inch device?

You choose which hardware solution suits your work environment. A complete set of innovative software options also makes the Gateway an even more powerful tool.

Desktop Extended Edition (DX)

- Desktop Extended

Rack Extended Edition (RX2)

- Rack Extended
- 430 x 345 x 47 mm
- 2.600 g
- redundant power supply
- LCD display & LEDs for easy Start-up

OPTIONS

E-mail to SMS

Many programs communicate important information exclusively as e-mails. However, SMS messages generate much more attention and provoke a much more instant response.

This way you will also learn about important events, even when you are not regularly reading your e-mails. Critical for monitoring your fire protection or video surveillance systems.

Monitoring

The SMS Gateway monitoring system can monitor your servers and report any failures. You will be notified, even if your actual monitoring system fails. If the internet connection in your data center no longer works, you will also be reliably informed.

No longer wonder who will monitor your servers at night or during weekends to report problems.

Telegram

The Messenger App saves your money. If the receiver doesn't use telegram, he simply gets a text message.

High availability

Particularly important whenever the SMS Gateway performs critical jobs. Greater security means better planning for trouble-free operation.

Ring

With the Ring feature, you can make the recipient's phone ring, in addition to sending an SMS. This increases attention during off-peak hours and the night.

Auto Reply

Reply to incoming messages with a standardised and automatically sent SMS message.

SMS message forwarding

Forward incoming SMS messages to your choice of recipients as SMS messages, e-mails or script. The brevis.one SMS Gateway is adaptable to your sophisticated deadline messaging and delivery confirmation requirements.

Messages routing

Target your SMS messages with a rule-based routing of SMS and e-mail messages. This allows you to perform different actions depending on the sender, recipient or content of the message.

For example, send different messages to different locations depending on the region from which the SMS message is sent.

Outlook Plugin

Outlook is the standard for corporate communication: it is fast, uncomplicated and widely used. With the Outlook Plugin you can send SMS messages via Outlook using the contacts in your Outlook address book without having to maintain it separately (requires e-mail to SMS).

Recipient groups

Send messages to multiple recipient groups saving you the effort in having to write and send each message separately. Address different departments, specific customer segments or regional teams easily and your targeted messages.
